

Blueberries (ERICACEAE)

(Paul H., Bend, OR) My Blueberry Bushes weren't doing anything special during Spring of this year, especially the one by the rock was weak, and had few berries.

So, I decided to add some **PANÁK-ite**¹ to each of them.

Wham!

Within two weeks they burst into berries so big and juicy that my gardeners and neighbors starting helping themselves to them after the lights were out.

All the Blueberry Bushes show new growth and tons of berries. Look at them now!

¹ Trademark / brand-name (presently sold in the West in small containers, bags and packets) for the *Montmorillonite* matrix imbedded with lignitic silts and chelated trace minerals from Panaca, Nevada that is highly regarded by home gardeners, hydroponics and green house growers, nurseries, and exotic flowers and house-plant fanciers. www.montmorillonite.org **Window Peak Trace Minerals**
