

Grapes (VITACEAE)

(Frank G., Delano, CA) indicates that he applied ½ ton of *Paná-k-ite*¹ per acre to ten acres of his vineyard and noticed immediately the increase in moisture content of the soil. The foliage grew out better with a healthier color, and the fruit cane experienced a 50% gain over the non-treated vines. Some **Alicante vines** suffering from Pierce Disease were treated with 20 lbs each of *Paná-k-ite* about 8-10 inches deep, and within just two weeks new growth was observed.

A neighbor applied the same treatment to his diseased **White Malagas** and **Emperor Vines** with the same results.

(Pete P., Delano, CA) tells that some of his **grape vines** on his ranch were dying and *Paná-k-ite* restored their vitality allowing them to bear an increased quantity of **grapes** of larger than usual size. Also, the **grapes** from the revived **vines** had more sugar content than those not treated.
